

1. COURSE

Ce séminaire est consacré à :

- The latest Threat briefing and trends; including Social Engineering
- Cyber Security threats in the context of procurement and supply chain
- Reputational, operational and financial risks relating to Cyber Security
- Assurance regarding common regulatory and legislative requirements
- Advise on procurement and supply chain Cyber Security good practice
- Assurance and trust measures in third party relationships, including Cloud providers
- Risk treatments and Cyber insurance options
- Discussion, real-world scenarios and exercises
- Know where to get further support.

2. COURSE CONTENT

Cyber Security is more important than ever, with large businesses and organisations investing significant sums in their own defences. Cyber criminals however are always looking for the weakest link and often a vulnerability somewhere in the Supply Chain is used as an entry point.

As organisations tighten their own defences, attackers are increasingly exploiting procurement and supply chain vulnerabilities, with devastating financial, legal, operational, and reputational consequences. These include loss of data and/or intellectual copy right (IPR), as well as cyber fraud. This course will help you understand the threats and what you need to do to protect yourself, whether you are procuring, supplying or both and, importantly, how you can use strong security as a competitive differentiator when engaging with other businesses and interests.

3. COURSE FORMAT

Learners will engage in an interactive workshop which will allow them to develop theoretical knowledge and apply it to their own situations. Delivery will be through a blended approach that will allow learners to fully engage in the session and gain practical examples of how to turn theory into practice.

4. DETAILED COURSE PROGRAM (unrolled training sequences)

Session	Delivery
1	Inroduction
2	Threats and Vulnerability Developing an understanding of the Cyber Security threats in the context of procurement and supply chain operations
3	Risks Developing an understanding of the reputational, financial and operational risks to the Cyber Security posture of an organisation
4	Legislation and Expectations A review of the current in country and international legislative requirements in supply chain operations
5	Additional Options A look at the options available around risk treatments and Cyber insurance options
6	Implementation Examine ways in which organisations can learn from real life examples and scenarios and how these could be implemented across an organisation
7	Course Summary and Evaluation

This course is open to anyone who has responsibility for leading, managing, contributing to or assisting in the process of engaging with or as a third party supplier within businesses and organisations.

5. EVALUATION DU COURS

Participant engagement and contribution is essential in this course. It is expected that all learners fully interact with the learning and the group activities.
